

AMENDMENTS TO THE CLAIMS

Please amend the claims below by deleting items with a strikeout (i.e. ~~patent~~) or brackets / double brackets(i.e., [patent] or [[patent]]) and adding items with an underline (i.e. patent).

1. (Currently Amended) A hand held duster comprising:

a handle;

a duster head removably attached to a distal end of said handle;

an internal battery and motor housed within an internal compartment of said handle
electrically coupled to a control for actuating operative control of said duster[.]; and
an extension arm removably attachable to said handle.

2. (Canceled)

3. (Currently Amended) The duster of Claim [[2]] 1, wherein said extension arm comprises:

a cylindrical receiving cavity formed at a distal end of said arm, said cavity for
[[circumscribing]] receiving a proximal end of said handle;

a pair of opposing receiving slots formed circumjacent said cavity, said slots for receiving
and impinging guide locking pins formed at [[said]] a proximal end of said handle.

4. (Currently Amended) The duster of Claim 3 further comprising said guide locking pins
formed at a proximal end of said [[arm]] handle.

5. (Original) The duster of Claim 4, wherein said extension arm comprises a linear extension arm for reaching elevated spaces.

6. (Original) The duster of Claim 4, wherein said extension arm comprises an angled extension arm for reaching elevated and recessed spaces.

7. (Currently Amended) The duster of Claim 6, wherein said extension arm comprises a curvilinear extension arm [[is]] coupled with said angled extension arm for reaching elevated spaces.

Please add the following New Claims:

8. (New) A cleaning apparatus comprising:
- a handle having:
 - an operational control;
 - a pair of pins formed at a proximal end of said handle;
 - an internal compartment housing a power source and motor, said power source and motor electrically coupled to said operational control;
 - a cleaning head removably attached to a distal end of said handle; and
 - a first extension arm, a second extension arm, and a third extension arm, wherein each one of said arms comprises:
 - a cavity formed at a distal end of said arm, said cavity receiving said proximal end of said handle;
 - a pair of slots formed circumjacent said cavity, each one of said slots receiving and coupling with each one of said pins.
9. (New) The apparatus of Claim 8, wherein one of said arms is a linear extension arm for reaching elevated areas.

10. (New) The apparatus of Claim 9, wherein one of said arms is a curvilinear extension arm.
11. (New) The apparatus of Claim 10, wherein one of said arms is an angled extension arm.
12. (New) The apparatus of Claim 11, wherein said first extension arm is coupled to said handle, and wherein said second extension arm is coupled to said first extension arm.
13. (New) The apparatus of Claim 11, wherein said first extension arm is coupled to said handle, and wherein said second extension arm is coupled to said first extension arm, and wherein said third extension arm is coupled to said second extension arm.
14. (New) The apparatus of Claim 8, wherein one of said arms is a curvilinear extension arm.
15. (New) The apparatus of Claim 14, wherein one of said arms is an angled extension arm, said curvilinear extension arm is coupled to said angled extension arm.
16. (New) The apparatus of Claim 15, wherein one of said curvilinear extension arm and said angled extension arm is coupled to said handle, wherein said handle, said curvilinear extension and said angled extension arm form a U-shape for reaching elevated and recessed areas.

17. (New) The apparatus of Claim 8, wherein one of said arms is an angled extension arm.
18. (New) The apparatus of Claim 17, wherein one of said arms is a curvilinear extension arm, said angled extension arm is coupled to said curvilinear extension arm.
19. (New) The apparatus of Claim 18, wherein one of said angled extension arm and said curvilinear extension arm is coupled to said handle, wherein said handle, said curvilinear extension and said angled extension arm form a U-shape for reaching elevated and recessed areas.
